Xanthomonas campestris Overes Arabidopsis Stomatal

May 4th, 2020 - Pathogen induced stomatal closure is part of the plant innate immune response

Phytopathogens using stomata as a way of entry into the leaf must avoid the stomatal response of the host In this article we describe a factor secreted by the bacterial phytopathogen Xanthomonas campestris pv campestris Xcc capable of interfering with stomatal closure induced by bacteria or abscisic acid ABA'

'**Stomata and pathogens PubMed Central PMC**

February 3rd, 2017 - Stomata are small pores located on the leaf surface that allow plants to exchange gases with the environment They play an essential role in the intake of CO 2 for photosynthesis but at the same time they allow water

loss by transpiration Their position at the interface between internal plant tissues and the environment make them convenient gates for endophytic colonization by phytopathogens"
