**transbronchial cryobiopsy in diffuse
parenchymal lung**

August 5th, 2019 - this review is about this promising application of cryobiopsy in the diagnostic process of diffuse parenchymal lung diseases recent findings recent studies document that with transbronchial cryobiopsies the diagnosis of usual interstitial pneumonitis can be made confidently by pathologists with a good interobserver agreement'

'transbronchial cryobiopsy in diffuse parenchymal lung

May 20th, 2020 - title transbronchial cryobiopsy in diffuse parenchymal lung disease retrospective analysis of 74 cases abstract background diagnostic evaluation of patients with diffuse parenchymal lung disease dpld is best achieved by a multidisciplinary team correlating clinical radiological and pathologic features'

'transbronchial cryobiopsy in diffuse parenchymal lung

May 23rd, 2020 - the diagnostic accuracy of standard forceps transbronchial biopsies ranges from 50 to 70 percent but also depends on the underlying disease poor results are seen in usual interstitial pneumonia
