October 10th, 2019 - the  
banach tarski paradox is  
a theorem in set  
theoretic geometry which  
states the following  
given a solid ball in 3

---

dimensional space there exists a deposition of the ball into a finite number of disjoint subsets which can then be put back together in a different way to yield two identical copies of the original ball indeed the reassembly process involves only moving the pieces' 'the pea and the sun a mathematical paradox
