April 8th, 2020 - choose the statements that most closely match your observations of the large scale structure of the universe in this plot there are large voids that have almost no galaxies in them as a whole the distribution of galaxies is about the same whether one looks above or below the plane of the galaxy'

'turbulence and magnetic fields in the large scale

December 31st, 2019 - the nature and origin of turbulence and magnetic fields in the intergalactic space are important problems that are yet to be understood we propose a scenario in which turbulent flow motions are induced via the cascade of the vorticity generated at cosmological shocks during the formation of the large scale structure the turbulence in turn amplifies weak seed magnetic fields of any origin"saraswati one of the most massive large scale

June 3rd, 2020 - large scale structures in the universe are found to be hierarchically assembled with galaxies together with associated gas and dark matter being clumped in clusters which are anized with other clusters smaller groups filaments sheets and large empty regions voids in a pattern called the cosmic web which spans the'

'universe in a box formation of large scale structure

June 2nd, 2020 - study of structure formation in the universe is an area of forefront research in astrophysics the early evolution when the seed fluctuations are small can be calculated analytically on a piece of paper without the help of large supercomputers as the fluctuations grow in their amplitude the evolution becomes too complex and theorists have to use computers to follow the subsequent evolution'

'wmap formation of universe structures

June 1st, 2020 - learn more about structure formation at these sites the Sloan Digital Sky Survey SDSS this group plans to map the positions of over 100 million galaxies and determine the distances to over a million galaxies and quasars the effort will produce the largest known survey to date of cosmic structure in the universe'
