*June 6th, 2020 - facts about neptune neptune*

---

---

is the most distant planet from the sun  
neptune is the smallest gas giant a year on  
neptune lasts 165 earth years neptune is named  
after the roman god of the sea neptune has 6  
faint rings neptune was not known to the  
ancients it is not visible to the naked eye  
and was first observed in 1846''**book review**  
**the neptune file saccade**

April 15th, 2020 - the neptune file a story of  
astronomical rivalry and the pioneers of  
planet hunting you might expect planet neptune  
s discovery to be worthy of a footnote or a  
magazine article at most yet tom standage  
manages to bring alive a fascinating story  
with an entertaining cast of characters from  
the 19th century around this discovery'

'neptune astronomy wiki fandom

April 27th, 2020 - neptune is 17 times the  
mass of earth and is slightly more massive  
than its near twin uranus which is 15 times  
the mass of earth but not as dense as neptune  
neptune orbits the sun at an average of 30.1  
astronomical units the planet is named after  
the roman god of the sea neptune so the planet  
s astronomical symbol is neptune s trident'

'neptune astronomy

June 1st, 2020 - size neptune is slightly  
smaller than uranus and has a diameter of 31  
000 miles 50 000 kilometers so about 4 earths  
would fit across its face distance from the  
sun neptune is the eighth'
