**Multimolecular assemblies on high surface area metal**

**July 31st, 2017 - High surface area metal oxides offer a unique substrate for the assembly of multiple molecular components at an interface The choice of molecules metal oxide and the nature of the assembly method can have a profound influence on the mechanism rate and efficiency of photoinduced energy and electron transfer events at the interface'**

*'Oxygen Mediated Diffusion of Oxygen Vacancies on Science*

*January 16th, 2003 - The rutile TiO<sub>2</sub> 110 surface has emerged in the literature as the prototypical system for fundamental surface science studies of transition metal oxides The ideal TiO<sub>2</sub> 110 surface has two characteristic surface sites five fold coordinated Ti 4 atoms and two fold coordinated O 2? atoms Fig 1A'*

*'Metal oxide adhesion Wikipedia*

*December 26th, 2019 - Metal oxides are formed consistent with minimizing surface energy and minimizing system entropy The formation reactions are chemical in nature forming bonds between oxygen dimers and pure metals or metal alloys The reactions are endothermic for transition metals and semi metals'*

**'Metal metal?oxide interfaces A surface science approach**

*December 15th, 2019 - Metal?oxide metal interfaces play an important role for example in the joining of an oxide ceramic to a metal for sealing applications In order to probe the chemical and physical properties of such an interface we have performed Auger electron spectroscopic AES and temperature programmed desorption TPD experiments on a model system'*
