of the functional
biology of fish and
how this may be
affected by the widely

contrasting habitat conditions within the aquatic environment it describes the recent advances in comparative animal physiology which have greatly influenced our understanding of fish function as well as generating questions that have yet to be resolved'

'fish

June 3rd, 2020 - fish are gill bearing aquatic craniate animals that lack limbs with digits they

form a sister group to the tunicates together forming the olfactores included in this definition are the living hagfish lampreys and cartilaginous and bony fish as well as various extinct related groups tetrapods emerged within lobe finned fishes so cladistically they are fish as well'

'fish physiology
May 31st, 2020 - fish

physiology is the scientific study of how the component parts of fish function together in the living fish it can be contrasted with fish anatomy which is the study of the form or morphology of fishes in practice fish anatomy and physiology complement each other the former dealing with the structure of a fish its component parts and how they are put together such as might be the structure

and function of proteins

June 5th, 2020 -
proteins are very
important molecules
that are essential for
all living organisms by
dry weight proteins
are the largest unit
of cells proteins are
involved in virtually
all cell functions and
a different type of
protein is devoted to
each role with tasks
ranging from general
cellular support to
cell signaling and
lootion' '**essential**
